(HUMA-) HUMAN GENOME SCI INC.

Brewer LA; Greene Ruben SM, Rosen CA, Fischer CL, Soppet DR, Carter KC; Bednarik DP, Endress GA, Yu G, Ni J, Feng P, Young PE, G; Ferrie AM, Duan R, Hu J, Florence KA, Olsen HS, Ebner R, Moore PA, Shi Y, Lafleur DW, Li Y, Zeng Z, Kyaw H;

WPI; 1998-609887/51

P-PSDB; AAW75132

New isolated human genes and the secreted polypeptides they encouseful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood disorders.

Claim 1; Page 229-230; 447pp; English.

This sequence represents a nucleic acid molecule which encodes a secreted human protein. The gene number, and the clone it is derived from, are detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion corporated to the human protein only. The invention relates to 70 novel genes and theh human protein only. The invention relates to 70 novel genes and their fragments (nucleic acid sequences: AAV34154-V34276, amino acid sequences AAW75057-W75179) which are useful for preventing, treating acid sequences and their genes and their genes and their sequences and protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polyprotides in a sample or by determining the presence of mutations in the new polyprotides. Specific uses are described for each of the 70 polyprucleotides, based on which tissues they are most highly expressed in (see AAV34154 for described uses). (Updated on 25-MAR-2003 to correct PI field.)

Sequence 1925 BP; 388 A; 613 C; 545 G; 377 T; 0 U; 2 Other;

Novel isolated human secreted HODAZ50 polypeptide useful for diagnosing or treating deficiencies or disorders of the immune system, autoimmune disorders, hyperproliferative disorders, and infectious diseases.

Claim 4; Page 130-131; 243pp; English.

The invention describes an isolated human secreted HODAZSO polypeptide from comprising a sequence at least 95% identical to a sequence selected from polypeptide fragment of any one of the 122 polypeptide sequences of PS, fully defined in the specification and having biological activity, polypeptide domain or spelicipe of PS, full-length according to protein of PS, or variant, allelic variant or species homologue of PS. (I) or a polymucleotide (II) amonding (I) is useful for preventing, treating, or ameliorating a medical condition in a mammalian subject. (I) is also useful for diagnosing a pathological condition or a subject. (I) is useful for independent of the polypeptide with the binding partner and determining whether the binding partner which involves contacting the polypeptide with the binding partner which involves contacting the polypeptide with the binding partner and determining whether the binding partner and determining whether the binding partner and determining whether the binding partner and determining whether the binding of partner and deficiency disorders of hamatopoletic cells, to treat immunologic deficiency disorders of hamatopoletic cells, to treat immunologic deficiency disorders, thrombocytopenia or hemoglobinuria, blood for disorders, blood platelet disorders, autoimmune disorders and wiskott-Aldrich disorders, blood platelet disorders, autoimmune disorders dermatitis, glomenlombritis, Grave's disease), allergic reactions, and dermaticis, glomenlombritis, Grave's disease), allergic reactions, cells and disorders, benchylic anamina, rhemmacoid architistic, partner diseases (e.g., viral, partnerial, fungal or parasitic infection), central and peripheral nervous system diseases (e.g., spinal coorders in the abdomen, bone, breast, disease), allergic reactions, system diseases (e.g., spinal code disorders, head trauma or stroke), to differentiate, proliferate and attract cells leading to herself mammalian catabolism affecting additive or preservative, processing, utilisation, as a food addit

(HUMA-) HUMAN GENOME SCI INC.

Ruben SM, Rosen CA, Fischer CL, Soppet DR, Carter KC; Bednarik DP, Endress GA, Yu G, Ni J, Feng P, Young PE, Greene JM; Ferrie AM, Duan R, Hu J, Florence KA, Olsen HS, Ebner R, Brewer LA; Moore PA, Shi Y, Lafleur DW, Li Y, Zeng Z, Kyaw H;

WPI; 1998-609887/51 P-PSDB; AAW75067 New isolated human genes and the secreted polypeptides they encode useful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood disorders.

Claim 1; Page 171-172; 447pp; English.

This sequence represents a nucleic acid molecule which encodes a secreted human protein. The gene number, and the clone it is derived from, are detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin FC oportion (e.g. AAV34145) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 70 novel genes and their fragments (mucleic acid sequences: AAV34184-V34276; amino acid sequences AAV35057-W75179) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, by the propertides in a sample or by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polypuclectides. Specific uses are described for each of the continuation of the search of the continuation of the content of the continuation of the continuation of the continuation of the content of the co field.) (Updated on 25-MAR-2003 to correct PI field.)

2003-466138/44. P-PSDB; ABO01943. Novel isolated human secreted HODAZ50 polypeptide useful for diagnosing or treating deficiencies or disorders of the immune system, autoimmune

Line introduction describes an isolated human secreted HODAZSO polypeptide from polypeptide fragment of any one of the 123 polypeptide sequences of from polypeptide fragment of any one of the 123 polypeptide sequences of 124 polypeptide domain or epitope of Ps, secreted form of Ps, fully defined in the specification and having biological activity protein of Ps, or variant, allelic variant or species homologue of Ps. (T) or a polymucleotide (II) encoding (I) is useful for preventing, or ameliorating a medical condition in a mammalian subject. (I) is useful for identifying a binding partner which involves contacting the polypeptide with the binding partner and determining whether the binding partner and determining whether the binding partner and determining whether the binding partner and determining whether the binding partner and determining whether the binding partner and determining whether the binding partner and determining whether the binding partner and determining whether the binding partner and determining whether the binding partner and determining whether the binding partner and determining whether the binding partner and determining whether the binding partner and determining whether the binding partner and determining whether the binding partner and determining whether the binding partner and determining whether the binding partner and determining whether the binding corders, ataxia telangiectasia, HIV infection, coagulation disorders, blood plateled disorders, autoimmune disorders (e.g., Addison's disease, haemolytic anaemia, rheumatoid architis, grave's disease, blood plateled disorders, intentions of coatted in the abdomen, bone, breast, diseases (e.g., viral, coatterial, fungal or parasitic infections diseases (e.g., viral, torgal or parasitic infections diseases (e.g., viral, torgal or parasitic infections diseases (e.g., viral, coatterial, fungal or parasitic infections, central and parameterial, replace or protect tissue damaged by parameterial, replace or protect tissue damaged by the disea metabolism affecting catabolism, anabolism, processing, utilisation, and storage of energy, to change a mammel's mental state or physical state, or as a food additive or preservative, such as to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors or other nutritional components. This sequence encodes a novel human secreted protein The invention describes an isolated human secreted HODAZ50 polypeptide disorders, hyperproliferative disorders, and infectious diseases. Claim 4; Page 85-86; 243pp; English. $\mathbb{Z} \times \mathbb{Z} \times$

```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 3, 2

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                       Description
